

Drum Clamps

Drum Clamp - Forklifts are used to handle storing, lifting and moving pallets. For facilities that handle products inside drums, you must use an attachment so as to store, move and lift them. There are numerous drum forklift accessories which you could obtain for all of your drum lifting requirements. These attachments are particularly used to be able to handle drum containers - therefore there is no risk of damage to the item or drum container when they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner could be used to load and unload drums off of vehicles, racks, and drum stands. These are available in three or four tine models. This particular accessory is totally mechanical, thus allowing the the one operating it to be able to operate all from the comfort of the lift truck seat. Able to move large and extra large plastic drums, steel, its capacity is 210 liters. This particular accessory is utilized for drum pyramid stacking.

The drum grab is fork mounted and is designed with the sole purpose of handling steel drums that have rolling hoops. Even though the reason for the design was to handle steel drums with rolling hoops, the drum grab can accommodate the transporting of extra large and large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is a forklift attachment which mounts on to the forks themselves. The objective of the drum rotator is to pick up the drum and turn it upside down. The drum fits in to the rotator using a steel clamp that fits over the center of the drum. The rotation is executed by either a crank handle or a continuous loop chain. The crank handle is utilized for operations which happen below shoulder level. For operations that should occur above shoulder level, the continuous loop chain will be utilized.

Drum tines are straightforward fork mounted attachment that can be designed for unstacking or stacking 210-liter metal drums. Stacking involves nothing elaborate, just simple horizontal placement of the drums. The carriage-mounted enhancements reduce the load center of the drums.

Automatic Tongs

Drum tongs come in semi-automatic and automatic units. They are used in the tight head or open topped steel drum kinds. The drum tongs could be attached in several ways to the forklift. One method is to attach them beneath a fork-mounted hook. One more way is to attach them to a carriage mounted jib or a fork-mounted jib. Both the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the individual operating it to ever leave the seat of the lift truck.

Rim Grip Handler

When drums require storage with inadequate area accessible, the Rim Grip Drum Handler is the ideal alternative in drum forklift accessories. This attachment would work for both the 210 L drums as well as 120 L drums. The Rim Grip Handler works by using metal jaws so as to grab the rim of the drum. It picks the drum up and sets it down without requiring any space between the drums. The typical unit utilized in the industry is a zinc-plated handler, though, this particular accessory comes obtainable in stainless steel for the food and drink industry.
